WYOMING SURFACE WATER CLASSIFICATION LIST

Water Quality Division
Surface Water Standards

June 21, 2001
Updated July 26, 2013

The Wyoming Surface Water Classification list is divided into two parts, Table A and Table B. The listings in Table A are referred to as the *PRIMARY CLASSIFICATIONS* which take precedence over the listings in Table B. The water classifications contained in this document are based upon the provisions of Chapter 1 of the Wyoming Water Quality Rules and Regulations - Surface Water Standards, specifically Sections 4, 33, 34, 35, and Appendix A.

TABLE A - PRIMARY CLASSIFICATIONS

The waters listed in Table A are those that are either named on the USGS 1:500,000 scale hydrologic map of Wyoming or have been specifically classified by the Wyoming DEQ, Water Quality Division. The waters in Table A are organized by river basin in a downstream to upstream order. An indented entry is tributary to the previous entry.

TABLE B

The waters listed in Table B are those that are contained in the Wyoming Game & Fish Department's "Streams and Lakes Inventory" database as of June 2000. The classifications shown for each of the waters in Table B are based on the presence or absence of fish species in that water. Most of the waters listed in Table A are also contained in Table B and in most cases the classifications are the same. There are circumstances, however, where the classifications may differ between the two tables. Where there is a difference in classification, Table A always takes precedence. Table B can only be used to determine the classification of waters that are not listed in Table A.

Table B is organized alphabetically by water name. A G&F identification number included with each entry can be used as a cross-reference to the Game & Fish Department database for information on the specific fish species that serve as the basis for that classification.

DESIGNATED USES

The uses that are protected on Wyoming waters are listed and described in Section 3 of the Surface Water Quality Standards and include agriculture, fisheries, aquatic life other than fish, industry, drinking water, fish consumption, recreation, scenic value, and wildlife. There are also numerous classifications for surface waters of the state. Except for Class 1, waters are classified according to their designated uses. Class 1 waters are specially designated waters on which the existing water quality is protected regardless of the uses supported by the water. The table that follows shows the uses designated on each of the use-based water classifications.

SURFACE WATER CLASSES AND USE DESIGNATIONS

	Drinking Water	Game Fish	Non-Game Fish	Fish Consumption	Other Aquatic Life	Recreation	Wildlife	Agriculture	Industry	Scenic Value
1*	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
2AB	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
2A	Yes	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes
2B	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
2C	No	No	Yes	Yes	Yes	Yes	Yes	Yes	Yes	Yes
2D	No	When Present	When Present	Yes	Yes	Yes	Yes	Yes	Yes	Yes
3A	No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes
3B	No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes
3C	No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes
3D	No	No	No	No	Yes	Yes	Yes	Yes	Yes	Yes
4A	No	No	No	No	No	Yes	Yes	Yes	Yes	Yes
4B	No	No	No	No	No	Yes	Yes	Yes	Yes	Yes
4C	No	No	No	No	No	Yes	Yes	Yes	Yes	Yes

* Class 1 waters are not protected for all uses in all circumstances. For example, all waters in the National Parks and Wilderness are Class 1, however, all do not support fisheries or other aquatic life uses (e.g. hot springs, ephemeral waters, wet meadows etc.). For stormwater permitting, 401 Certification, and WQ assessment purposes, the actual uses on each particular water must be determined independently.

Wyoming Surface Water Classifications

The water classifications contained in this document are based upon the provisions of Chapter 1 of the Wyoming Water Quality Rules and Regulations - Surface Water Standards, specifically Sections 4, 33, 34, 35 and Appendix A.

ALL SURFACE WATERS IN WYOMING ARE CLASSIFIED AS FOLLOWS:

A. **Class 1 Waters.** The following waters are designated Class 1:

1. All surface waters located within the boundaries of national parks and congressionally designated wilderness areas as of January 1, 1999;

2. The main stem of the Snake River through its entire length above the U.S. Highway 22 Bridge (Wilson Bridge);

3. The main stem of the Green River, including the Green River Lakes from the mouth of the New Fork River upstream to the wilderness boundary;

4. The main stem of the Wind River from the Wedding of the Waters upstream to Boysen Dam;

5. The main stem of the North Platte River from the mouth of Sage Creek (approximately 15 stream miles downstream of Saratoga, Wyoming) upstream to the Colorado state line;

6. The main stem of the North Platte River from the headwaters of Pathfinder Reservoir upstream to Kortes Dam (Miracle Mile segment);

7. The main stem of the North Platte River from the Natrona County Road 309 bridge (Goose Egg bridge) upstream to Alcova Reservoir;

8. The main stem of Sand Creek above the U.S. Highway 14 bridge;

9. The main stem of the Middle Fork of the Powder River through its entire length above the mouth of Buffalo Creek;

10. The main stem of the North Fork of the Tongue River, the main stem of the South Fork of the Tongue River, and the main stem of the Tongue River above the U.S. Forest Service boundary;

11. The main stem of the Sweetwater River above the mouth of Alkali Creek;

12. The main stem of the Encampment River from the northern U.S. Forest Service boundary upstream to the Colorado state line;

13. The main stem of the Clarks Fork River from the U.S. Forest Service boundary upstream to the Montana state line;

14. All waters within the Fish Creek (near Wilson, Wyoming) drainage;

15. The main stem of Granite Creek (tributary of the Hoback River) through its entire length;

16. Fremont Lake;

17. Wetlands adjacent to the above listed Class 1 waters.

B. **Classification Tables**. The tables that follow in this document contain a listing of individual water classifications for many of the larger waterbodies in each major river basin in the state. In addition to the listings contained herein, the following provisions apply:

1. **National Parks and Wilderness Areas.** All surface waters located within the boundaries of Yellowstone and Grand Teton National Parks and congressionally designated wilderness areas as of January 1, 1999 are Class 1 waters. Such Class 1 designation always takes precedence over the classification given in the listing. For example, Dinwoody Creek is shown as a Class 2 water; however, the upper portions are within a wilderness area and those portions are Class 1. The portion below the wilderness boundary is Class 2.

2. **Unlisted Waters.** The waters contained in the classification tables are all waters which are named on the USGS 1:500,000 hydrologic map of Wyoming and those otherwise classified by the department. The classification list does not contain an exhaustive listing of all the surface waters in the state. Those waters which are not specifically listed are classified as follows:

(a) All waters shown as having any species of game fish present in the Wyoming Game and Fish Department's *Streams and Lakes Database*[1] as submitted to the Department of Environmental Quality in June 2000 are classified as 2AB;

(b) All waters shown as having only nongame fish species present in the Wyoming Game and Fish Department's *Streams and Lakes Database* as submitted to the Department of Environmental Quality in June 2000 are classified as 2C;

(c) All other waters shall be classified as follows:

(i) Those waters supported by an approved UAA containing defensible reasons for not protecting aquatic life uses shall be 4A, 4B, or 4C (4C waters include isolated, effluent dependent waters);

(ii) Effluent dependent waters with an approved UAA that support resident fish populations shall be 2D;

(iii) Effluent dependent waters with an approved UAA that do not support resident fish populations shall be 3D;

(iv) The remaining waters shall be 3A, 3B, or 3C.

(d) Wetlands. All adjacent wetlands shall have the same classification as the water to which they are adjacent.

C. **Classification and Designated Use Changes Made Through Use Attainability Analyses.**

1. The *Wyoming Surface Water Classification List* is updated periodically to reflect changes in designated uses and classifications made through the use attainability analysis (UAA) process outlined in Chapter 1, Sections 4, 33, 34, and 35. All changes in classifications and designated uses made through UAAs can be found in the Use Attainability Analyses section of the Wyoming Surface Water Standards website: http://deq.state.wy.us/wqd/watershed/surfacestandards/index.asp and are denoted here by "(UAA)" with a hyperlink to the UAA.

2. Classifications that have been approved by the Wyoming Department of Environmental Quality Water Quality Administrator through

[1] The "Streams and Lakes Fish Inventory Database" used to derive these classifications is available upon request from the Wyoming Department of Environmental Quality, Water Quality Division, 122 W. 25th Street, Cheyenne, Wyoming.

the UAA process that have not been acted on by EPA are identified by an asterisk (*).

3. Categories of waters that have been changed through the UAA process may not be reflected in the classification list. These include effluent dependent, man-made isolated waters (4C, UAA)* and canals and ditches not known to support fish populations (4A, UAA)*. Please review the UAAs for the specific conditions associated with these categories of waters.

4. Waters designated for secondary contact recreation through the UAA process can be viewed on the Wyoming Surface Water Standards website: http://deq.state.wy.us/wqd/watershed/surfacestandards/index.asp or are identified here by an "(s)". All remaining waters are designated for primary contact recreation.

TABLE A

PRIMARY CLASSIFICATIONS

Water Classifications

Waters are listed within each drainage as they proceed upstream. An indented entry is tributary to the previous entry. All Class 2AB and 2B waters are designated as cold water game fisheries unless identified with a "ww" notation. All Class 2C waters are designated as warmwater fisheries. Waters designated for secondary contact recreation are identified by an “(s)”. Classifications changed through the UAA process are identified by “(UAA)”. UAAs that have been approved by the administrator, but not acted on by EPA are identified by an asterisk (*).

SURFACE WATER CLASSIFICATION LIST

TABLE B

Derived from the

WYOMING GAME AND FISH DEPARTMENT
STREAMS AND LAKES INVENTORY DATABASE

Submitted in June 2000

Table B - Wyoming Fish Inventory Database

The water classifications provided for in Chapter 1 of the Wyoming Water Quality Rules and Regulations - Surface Water Standards rely to some extent on the Wyoming Game and Fish Department's Fish Inventory Database for water classification purposes. The primary use of the database is to determine the classification of waters that are not specifically listed in Table A of this document. The tables that follow contain information extracted from the Game & Fish Database as submitted to the Department of Environmental Quality in June 2000. All of the waters that are recorded in the G&F database are represented in these tables along with the appropriate water quality classification.

How to interpret and use these tables for water quality classification purposes:

The water listings that follow *(Table B)* can only be used to determine the classification of waters that are **not listed** in Table A. Most of the waters listed in Table A can also be found in Table B and the classifications will usually be the same. However, there are circumstances where these tables will show a classification that differs from Table A. Wherever there is a difference or conflict between a classification in Table A and a classification shown in Table B, Table A takes precedence.

Class 1 Waters

Waters and water segments that are located in Grand Teton or Yellowstone National Parks, or in Congressionally designated wilderness areas are Class 1 regardless of the classification shown in these tables. Waters outside of the National Parks and wilderness areas that have been designated as Class 1 in Appendix A are also shown as Class 1 in these tables. Additionally, a note has been added to each Class 1 listing in this table which describes the exact reach of the waterbody that is Class 1. These notes are referenced by number in the table and are explained below:

1. All surface waters located within the boundaries of national parks and congressionally designated wilderness areas as of January 1, 1999;

2. The main stem of the Snake River through its entire length above the U.S. Highway 22 bridge (Wilson Bridge);

3. The main stem of the Green River, including the Green River Lakes from the mouth of the New Fork River upstream to the wilderness boundary;

4. The main stem of the Wind River from the Wedding of the Waters upstream to Boysen Dam;

5. The main stem of the North Platte River from the mouth of Sage Creek (approximately 15 stream miles downstream of Saratoga, Wyoming) upstream to the Colorado state line;

6. The main stem of the North Platte River from the headwaters of Pathfinder Reservoir upstream to Kortes Dam (Miracle Mile segment);

7. The main stem of the North Platte River from the Natrona County Road 309 bridge (Goose Egg bridge) upstream to Alcova Reservoir;

8. The main stem of Sand Creek above the U.S. Highway 14 bridge;

9. The main stem of the Middle Fork of the Powder River through its entire length above the mouth of Buffalo Creek;

10. The main stem of the North Fork of the Tongue River, the main stem of the South Fork of the Tongue River, and the main stem of the Tongue River above the U.S. Forest Service Boundary;

11. The main stem of the Sweetwater River above the mouth of Alkali Creek;

12. The main stem of the Encampment River from the northern U.S. Forest Service boundary upstream to the Colorado state line;

13. The main stem of the Clarks Fork River from the U.S. Forest Service boundary upstream to the Montana state line;

14. All waters within the Fish Creek (near Wilson, Wyoming) drainage;

15. The main stem of Granite Creek (tributary of the Hoback River) through its entire length;

16. Fremont Lake;

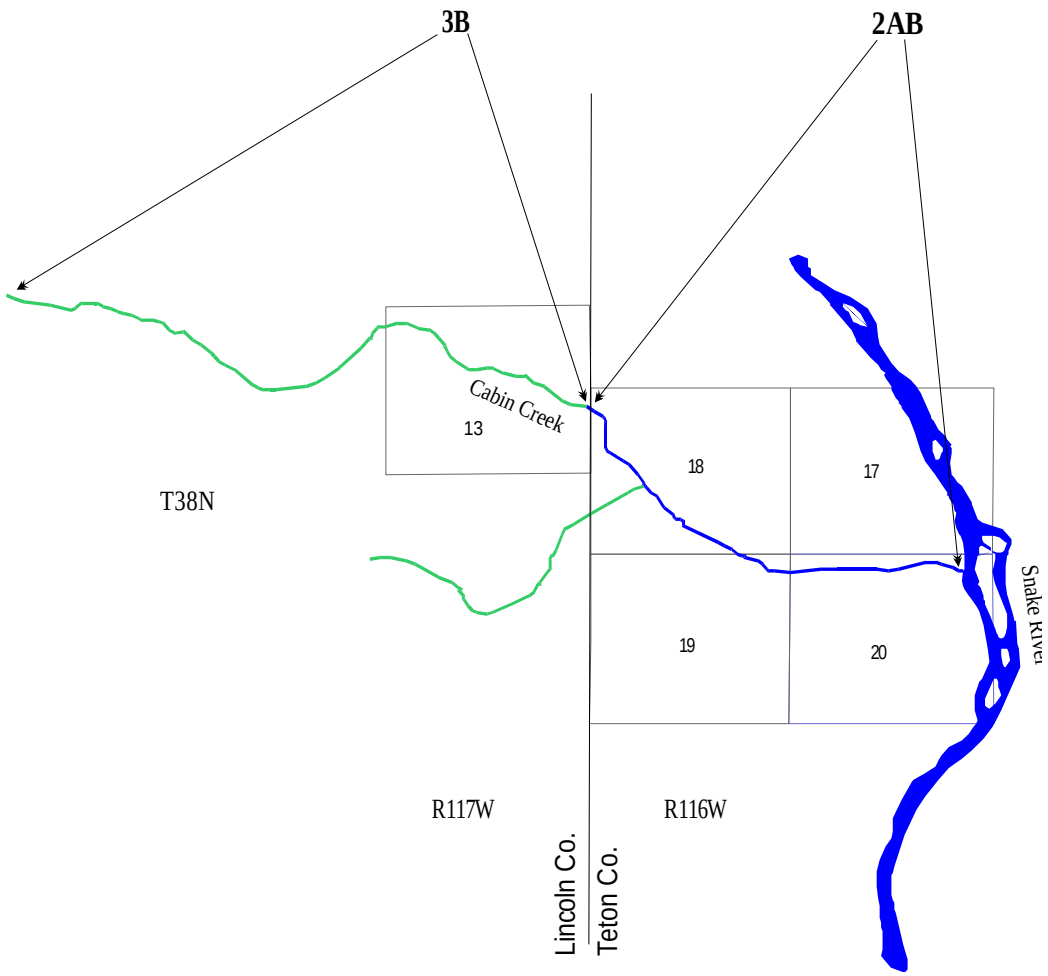
17. Wetlands adjacent to the above listed Class 1 waters.

Waters with Multiple Classifications

The Township, Range and Section information shown in the tables describes the location where the Game & Fish Department collected the fish inventory data. The legal description refers to the lowermost point of the stream segment to which the fish inventory applies. There may be multiple sites shown for some waters, particularly the larger mainstem rivers and streams that traverse long distances through the state. The classification shown in the tables for each stream segment is based on the fish species data that was collected at that particular site and may result in different classifications for different stream segments. The proper classification for waters that have multiple classifications shown in this table can be determined as follows:

1. The water listing must be cross-referenced with Table A. A positive reference can usually be made by matching both the water name and tributary. The location information (County, Township, Range, and Section) can also be used to identify the appropriate drainage basin in Table A. If the water appears in Table A, the Table A classification applies regardless of the information contained in Table B.

2. If the water is not listed in Table A, the classification shown in Table B applies. For streams with multiple classifications, the designations are to be applied in a downstream to upstream manner. The classification shown for the most downstream sampling site applies to the stream segment from its lowest point to the first upstream sampling site that has a different designation. At that point, the new classification applies in an upstream direction. This process continues until the stream ends.



Snake River
17
20
18
19
Cabin Creek
13
2AB
3B
Teton Co.
Lincoln Co.
R116W
R117W
T38N

Figure 1

Figure 1 above shows how Cabin Creek in the Snake River Basin is properly classified. Cabin Creek is not listed in Table A and is listed in Table B (page 56) as follows:

WATER NAME	TRIBUTARY TO	COUNTY	TWP	RANGE	SEC	CLASS	NOTE	G&F ID
CABIN CREEK	SNAKE RIVER	LINCOLN	38	117	13	**3B**		JN913190LN
CABIN CREEK	SNAKE RIVER	TETON	38	116	20	**2AB**		JN813190TN

The stream segment between the Snake River and the sampling station in Lincoln County *(T38N, R117W, Sec. 13)* is 2AB, and the segment above this point is 3B.

3. An impoundment that is specifically listed in the tables may have a different classification than the stream on which it is located. In these circumstances, the classification of a stream segment is not affected by the existence of a reservoir on that segment nor is the classification of the reservoir affected by the classification of the stream segment upon which it is located. Both are classified independently.

4. Where an impoundment is not specifically listed, it shares the same classification as the stream segment on which it is located.

5. Where a still body of water (lake, pond, reservoir) has multiple classifications shown in Table B, only the highest classification applies.
