Notes:

- Methods:**
- 1. Majority.** If 50% of workers or more within a labor group earn the same wage/fringe benefit, this becomes the prevailing wage/fringe benefit for the labor group in the respective district. If two different wages/benefits each account for 50% for a labor group within a district, a weighted average is performed.
 - 2. Significant Minority.** If 30% of workers or more within a labor group earn the same wage/fringe benefit, this becomes the prevailing wage/fringe benefit for the labor group in the respective district. If two different wages/benefits each account for 30% for a labor group within a district, a weighted average is performed.
 - 3. Weighted Average.** If no significant minority exists for a wage/fringe benefit, the prevailing wage/fringe benefit is calculated as $\frac{\{[(\text{Total Hourly Wage or Fringe Benefit})/(\text{Number of Workers})] + [(\text{Total Wages Or Benefits Paid})/(\text{Hours Worked})]\}}{2}$.
 - 4. Moving Average Wage.** If no data is received by the survey for a particular classification or if a lower skilled group has a higher wage rate than a higher skilled group in the classification of laborers, operating engineers, equipment operators, and/or teamsters (truck drivers), a moving average wage adjustment is applied according to rules and regulations of the Department of Employment.
