

DEQ PUBLIC MEETING
FEBRUARY 26, 2008
CROSBY WELL 25-3 WELL BLOWOUT

On Tuesday, February 26, 2008, the Wyoming Department of Environmental Quality (DEQ) and Windsor Energy Group, LLC will hold a public meeting to discuss recently completed site characterization activities at the Crosby Well 25-3 Blowout (site). The site was accepted into the DEQ Voluntary Remediation Program (VRP) on February 27, 2007. The Volunteer is Windsor Energy Group, LLC (Windsor).

Prior to the meeting, Windsor will provide all parties on the interested parties mailing list a copy of the final Public Participation Plan and Remedial Investigation Work Plan. The meeting will provide an opportunity for the public to ask questions about the final documents. The public had two previous opportunities to comment on the documents while they were in draft form. Public comments have been incorporated into the final documents.

Additional site characterization activities at the site were completed by Windsor between August and December 2007. Windsor will provide an update and answer questions on those activities at the meeting. In addition, Windsor will provide information and answer questions on both the interim measures remediation activities currently in progress and analytical data collected to date.

The meeting will begin at 7:00 pm at the Clark Pioneer Recreation Center in Clark, Wyoming. If you have any questions or comments, please contact Kathy Brown with the DEQ at 307-335-6949 or kbrown2@state.wy.us, or Dan Johnson with Windsor at 405-463-6943.
